

Your problem statement, solved.

A Shopify solution mapped to the four-to-five pinch points you and Matt raised across our June 3, 15, and 22 sessions — built so nothing that works today gets disrupted.

Parent: EB Golf Media LLC — True Spec Golf (B&M custom fitting: 41 US locations, ~\$19–20M retail, 9 builders) + Fairway Jockey, Mirror Golf & McLaren Golf (already on Shopify Advanced).

Today's fitting/POS stack: ADS → SKU Vault → Salesforce → ShipStation + Avalara + external payment portal.

Our framing: not "rip out ADS" — solve the pinch points and unify the four brands, with ADS untouched until a proof-of-concept earns the change.

YOUR PROBLEM STATEMENT → THE SOLUTION

1. Fitter productivity & native spec capture

PAIN Specs (length, swing weight, CPM, adapter, movable weights) are the heart of the business. Manual entry into Sheets + Shopify caused errors — the reason ADS exists. Anything slowing the fitter slows revenue.

SOLUTION Shopify POS now captures spec data **natively on line items** — one screen, no Sheets. Spring '26 POS v11 is **~73s faster per complex cart**. Chris Cote's Golf runs this exact workflow today.

2. No post-fitting payment link (Matt's #1)

PAIN Fitters lose deals when they can't reach a customer by phone after a fitting; ADS can't send a payment link.

SOLUTION Shopify POS sends a **text/email payment link in under 30 seconds**; the customer pays on their phone via Shop Pay — recovering deals that slip today.

3. The operational-complexity tax

PAIN 4+ systems × 4 brands → thousands of phantom open POs, SKU Vault not flowing back to Shopify, manual split-shipments, double-ships, constant reconciliation, no single customer source of truth.

SOLUTION Consolidate all four brands into **one Shopify admin** (Spring '26 Multi-Entity Selling), per-location rules/staff/bank accounts, Avalara native. Cote's saw **~50% less custom-order time, ~10 hrs/wk** back.

4. Don't disrupt what works

PAIN ADS works. The team isn't looking for another long redesign.

SOLUTION A self-contained **Boston proof-of-concept** with read-only stubs to ADS, SKU Vault & Salesforce (inventory sync; ADS order → Shopify draft order for payment). Nothing in today's flow changes during the POC.

5. Four brands & the online custom-club ambition

PAIN Brands are siloed, and selling custom clubs online has stalled over Fairway Jockey cannibalization concerns.

SOLUTION One unified admin gives shared customer data & reporting, a **controlled path to sell custom clubs online without cannibalizing Fairway Jockey**, plus Shop App reorders and Shopify Audiences (Plus) for higher-intent acquisition.

ADDRESSING WHAT CAME UP ON THE DEMO

Hardware across 41 locations: POS is a tablet app, but the POC needs only a handful of devices in Boston — not all 55–58 fitters on day one. We'll cost low-cost tablets (and a BYOD path) explicitly in the TCO, not assume iPads everywhere.

ADS integration: inventory syncs via API from SKU Vault; ADS orders flow into Shopify as draft orders via webhook for payment/invoicing; Avalara stays for tax. Shelby is researching middleware options.

"Worth it at an 89% close rate?": agreed — the payment-link gap is a small slice. The real value is **consolidation**: unifying four brands, enabling online custom-club sales, cleaner reporting, and removing manual reconciliation.

TO PUT REAL NUMBERS TO IT (FROM MATT)

- **ADS costs** — monthly fees, POS vs. backend, dev/server.
- **Card rates** today + external payment-portal fees.
- **Ecom GMV** for Fairway Jockey, Mirror, McLaren (have True Spec retail ~\$19–20M).
- **Legal structure** — four entities or one under EB Golf Media? (multi-entity vs. multi-store).
- **Apps** in the Advanced stores that must carry over.

RECOMMENDED NEXT STEPS

- **Reference call** with Chris Cote's Golf / CQL — same fitting workflow, honest build story. Fastest unlock.
- **TCO** — Matt's inputs → side-by-side (ADS + Advanced × 3 vs. unified Plus).
- **Architecture session** — Shelby + your developer to scope the Boston POC.
- **Target:** Plus signature by end of Q3 → POC Q4 2026 → side-by-side vs. ADS Q1 2027.
