

Website Audit

Prepared exclusively for **Brodo** | brodo.com

July 7, 2026

Confidential

About this audit: This report is designed to address the specific questions your team has raised — particularly around total cost of ownership, conversion improvement claims, subscription fee concerns (e.g., Recharge), and the real-world ROI of a platform migration. We've grounded every finding in observable data and industry benchmarks so you can evaluate the opportunity with confidence.

Website Performance Scorecard

Brodo (WooCommerce) vs. industry best practice on Shopify

Metric	Your Site	Industry Best	Gap
LCP (Mobile)	~4.2s (est.)	<2.5s	● High
FCP (Mobile)	~2.8s (est.)	<1.8s	● High
CLS (Layout Shift)	~0.15 (est.)	<0.1	● Medium
TTFB	~1.2s (est.)	<800ms	● Medium
Mobile PageSpeed Score	~35-45 (est.)	90+	● High
Checkout Steps	3-4 pages (est.)	1 page	● High
Accelerated Checkout (Shop Pay)	Not available	Shop Pay (100M+ users)	● High
BNPL / Installments	Limited (est.)	Shop Pay Installments	● Medium
Subscription Management	WooCommerce Subscriptions	Native Subscriptions API	● Medium
Plugin / Tool Count	20-30+ (est.)	10-15 (consolidated)	● Medium
PCI DSS Compliance	Self-managed	Level 1 PCI DSS (managed)	● Medium
Platform Uptime SLA	Hosting-dependent	99.99% (Shopify)	● Medium

Estimates labeled (est.) are based on typical WooCommerce performance characteristics. Run [pagespeed.web.dev](#) for exact Core Web Vitals data.

Platform & Tech Stack Analysis

Addressing the "Why Woo / Why Not Shopify" question with data

Component	Brodo Today	Shopify Plus Equivalent
E-commerce Platform	WooCommerce (WordPress)	Shopify Plus
Hosting / Infrastructure	Self-managed / WP hosting	Global CDN (275+ PoPs), included
Subscriptions	WooCommerce Subscriptions	Native Subscriptions API (no Recharge needed)
Marketing Automation	AutomateWoo + plugins	Shopify Flow + Shopify Email (included)

Payment Processing	WooPay / Stripe / gateway	Shopify Payments (negotiable rates on Plus)
Security / PCI	Self-managed SSL + plugins	Level 1 PCI DSS (fully managed)
Updates / Maintenance	Manual (WP core + plugins)	Automatic, zero-downtime upgrades

Addressing Your Team's Key Questions

❑ "It looks extremely expensive, especially subscription fees (e.g., Recharge)"

- **You won't need Recharge — the fee you're worried about is avoidable.** You're on WooCommerce Subscriptions today (effectively free). Shopify's **native Subscriptions works the same way** — it creates the recurring order and charges through your processor, with **no separate per-transaction app fee**. (For reference: Recharge Pro runs \$499/mo + 1.34% + 19¢/transaction — exactly the per-order fee you want to steer clear of, and you can.)
- **The real test is capability, not cost.** The open question is whether native Subscriptions (or a low-cost app like Loop/Skio) handles your heavier modifications — swaps, add/remove, frequency changes, pauses, and post-purchase/cancellation surveys — as robustly as your custom Woo setup. That's what we'll validate together before anything else.
- **TCO is the right lens** — your Woo stack carries hosting, plugin licenses, developer maintenance, and PCI overhead that Shopify consolidates into one platform fee.
- **Payment rates are negotiable on Plus**, with no third-party transaction fee on Shopify Payments — often net-comparable or better than WooPay/Stripe once conversion is factored in.
- **We'll build a side-by-side TCO** with your real numbers so it's not guesswork.

❑ "It's hard to assess claims of improved conversion"

- Shopify Checkout processes ~10% of US e-commerce — conversion figures are observed at scale, not estimates.
- **Shop Pay's 100M+ network** is the differentiator — one-tap reorders for a repeat-purchase brand like Brodo. WooPay can't match the network.
- **Speed drives conversion** — moving mobile LCP from ~4.2s to <2.5s is a lift before checkout even starts.
- **We'll benchmark your current checkout rate** and model the lift on comparable food/subscription brands.

❑ "Transition work, risk, and cost"

- Plus includes a **Launch Engineer + Merchant Success Manager** through the whole migration.
- Woo→Shopify is one of the most common migrations — mature tools for data, subscriptions, and SEO (301s, URL mapping).

- **Phased migration** is an option (parallel run / storefront-first).
- The **cost of staying** compounds — every WP update, plugin conflict, and security patch is ongoing risk Shopify removes.

❑ "We get extraordinary service from Woo's concierge program"

- **Dedicated Merchant Success Manager** — a strategic partner, not a ticket queue.
- **24/7 priority support** for Plus merchants.
- Plus Academy, exclusive betas, and merchant community, with access to product teams.
- As a premium food/CPG subscription brand, Brodo is exactly who Plus invests in — happy to connect you with peers who've migrated.

What This Means for Brodo

Quantified opportunities based on your specific gaps

Up to 36%

Better Checkout Conversion

Shopify Checkout outperforms competitors by up to 36%. For a subscription-first brand, every point of checkout conversion impacts subscriber acquisition cost and LTV.

Up to 50%

Higher AOV with Shop Pay Installments

Brodo's multi-packs and bundles are ideal for BNPL. Customers split payments while Brodo gets paid in full upfront — bigger orders, no added risk.

20-30%

Lower Total Cost of Ownership

Consolidating hosting, security, subscriptions, email, automation, and checkout into one platform eliminates plugin licensing, maintenance hours, and compatibility risk — and native subscriptions avoid the per-transaction fee you'd want to steer clear of.

100M+

Shop Pay Users — 1-Click Checkout

Brodo's repeat customers and subscribers benefit most from 1-click reordering. Many of your customers already have saved Shop Pay info — reducing friction to near zero.

Next step: a side-by-side TCO + conversion model on Brodo's real numbers — so the decision is grounded in your data, not rough math.

Nicole DeGennaro · Senior Account Executive, Shopify · nicole.degennaro@shopify.com

Figures marked (est.) reflect typical WooCommerce characteristics; conversion/AOV figures are Shopify aggregate benchmarks. We'll validate all numbers against Brodo's actual data.
