

Recap & roadmap

Where we landed on our call and the path forward — the use cases, the value, the plan, agreed next steps, and our timeline to **sign in September** and **go live in March 2027**.

Conservative target: \$250K online revenue/yr · Shopify Plus flat \$2,300/mo · DDI stays your source of truth

OVERVIEW

Shopify — tailored to Economy Plumbing

A quick primer on how Shopify fits what we discussed, coming from Magento + DDI. The short version: Shopify becomes your modern storefront and checkout, while DDI stays your source of truth.

1 Hosted & fully managed — unlike Magento

No servers to patch, PCI handled, no plugin sprawl. For a lean team, that removes the Magento upkeep and the manual PIM copy-paste you're doing today — Shopify runs the infrastructure so you run the business.

2 Modern storefront + Shop Pay checkout

Fast, mobile-first pages and one-click Shop Pay — the accelerated checkout that lifts conversion, especially on mobile. This is the "streamline & convert" piece you're after.

3 B2B is built in

Company accounts, customer-specific price lists, net terms, and quick reorder — so contractors, GCs, and property managers log in and see their own pricing. Maps directly to the tiered pricing you manage in DDI today.

4 DDI stays your source of truth — and you're not locked in

You're not replacing DDI now — Shopify is the storefront on top of it, with a proven connector (DCKAP) syncing products, inventory, pricing, and orders both ways to end the manual re-keying. And because Shopify is ERP-agnostic, if you migrate off DDI down the road the storefront comes with you — send me your future-ERP shortlist and I'll confirm compatibility.

5 App ecosystem + sales channels

Thousands of apps (marketing, reviews, social) and native channels (social/marketplace) to grow the traffic, referrals, and new-customer acquisition you mentioned — without custom development.

6 Built in parallel, then switched over

We build and test your Shopify store alongside your live Magento site, then switch the domain at launch — a de-risked path with no big-bang cutover.

USE CASES

Use cases

What the new storefront needs to deliver — confirmed on our call.

Modern Shopify storefront

Your ~50–90K shippable SKUs (excludes furnaces/water heaters) on a fast, modern storefront — built alongside your live Magento site and switched over at launch.

One-click Shop Pay checkout

Fast, mobile-friendly checkout to lift conversion — a core reason you're exploring Shopify.

B2B tiered pricing

Contractor / GC / property-management (and homeowner/retail) pricing, driven from your DDI segments, so each account logs in and sees its own price.

Modern channels + app ecosystem

Social-integrated selling channels and marketing apps to grow traffic, referrals, and new-customer acquisition.

DDI Inform stays your source of truth

Keep DDI as the ERP; connect it to Shopify via a proven connector (DCKAP) — products, inventory, pricing, orders in sync. No manual PIM copy-paste.

De-risked rollout

Built and tested in parallel with your live site (the antidote to the prior Billtrust implementation experience), then switched over at launch — no big-bang cutover.

THE VALUE

What Shopify delivers for Economy Plumbing

The core value, in plain terms.

Conservative online target: \$250K/yr post-launch

Your baseline number to grow from — and it sits far below the \$6M threshold where Plus variable fees kick in, so you stay at a flat \$2,300/mo.

\$250K/yr → flat
\$2,300/mo

1 Shop Pay checkout → more conversions & new customers

Fast, one-click, mobile-friendly checkout that lifts conversion and brings in new buyers.

2 B2B self-serve ordering

Contractors, GCs, and property managers log in, see their own pricing, and place & reorder online — off the phone.

3 DDI stays connected — no more manual work

Inventory, pricing, and orders sync automatically between DDI and Shopify — ending the manual PIM imports and re-keying.

4 Modern channels + app ecosystem

Social/marketplace channels and thousands of apps to grow traffic, referrals, and brand visibility.

Plan & payments

Recommended plan and the Shopify Payments rates that come with it.

Shopify Plus — \$2,300/mo flat at your volume

The right tier for your B2B pricing depth, the DDI integration load (10× API limits), checkout control, and dedicated support. Variable revenue-share fees only apply above **\$6M/yr** — well beyond your \$250K target — so you're at a predictable **flat \$2,300/mo**.

Shopify Payments rates (Plus)

Card type	Rate
Standard cards	2.25% + 30¢
Amex / commercial	2.95% + 30¢
Keep your current gateway instead	+0.2% third-party fee · Shop Pay not available

Shop Pay requires Shopify Payments. Send your current processor rates and I'll build the exact side-by-side comparison.

AGREED NEXT STEPS

Agreed next steps

What we each committed to coming out of the call.

Introduce 2 B2B implementation partners

Mid-range pricing, specialized in B2B Shopify + ERP integrations — **Nicole**

Share DDI + Shopify customer examples

Case studies of merchants running DDI connected to Shopify — **Nicole**

Schedule a technical validation call

Bring in a solutions engineer to validate the integration requirements — **Nicole**

Send future-ERP shortlist

Systems you're considering long-term, so we confirm Shopify compatibility — **Anthony**

Send current payment rates + online GMV

So I can build the exact Shopify Payments comparison and size the plan — **Anthony**

TIMELINE & MUTUAL ACTION PLAN

Timeline — sign in September, go live in March 2027

Sign in September, build and test through the winter, then go live in March 2027.

- This call · Aug 25, 2026 — Aligned on direction & next steps**
Confirmed requirements, the \$250K target, DDI-as-source-of-truth, and the partner-led path.
- Info exchange · late Aug – Sept 2026**
Anthony: current rates, online GMV, future-ERP shortlist. Nicole: 2 partner intros, DDI customer examples, SE technical validation call.
- Partner scoping + quote · September 2026**
Selected partner scopes the build, DDI ↔ Shopify (DCKAP) integration, and B2B pricing; delivers a quote.
- Sign · September 2026**
Sign in September to kick off the build.
- Build & test · Oct 2026 – Feb 2027**
DDI integration, B2B price lists, store + catalog, Shop Pay + channels, testing/UAT.
- Go live · March 2027**
Switch over and launch on Shopify.

Mutual action plan

#	Milestone	Owner	Target	Status
1	Align on direction & next steps	Both (this call)	Aug 25	Done
2	Introduce 2 B2B implementation partners	Nicole	Early Sept	Open
3	Share DDI + Shopify customer examples	Nicole	This week	Open
4	Send future-ERP shortlist	Anthony	Early Sept	Open
5	Send payment rates + online GMV	Anthony	Early Sept	Open
6	Technical validation call (solutions engineer)	Nicole + Anthony	Sept	Open

7	Partner scoping + quote	Partner + Anthony	Sept	Open
8	Sign	Anthony	Sept 2026	Target
9	Build & test — DDI integration + store	Partner + Anthony	Oct 2026 – Feb 2027	Open
10	Go live	Both	March 2027	Open

Recap of where we landed — owners and dates adjustable as the partner scopes the build.
