

PREPARED FOR THE SHOPIFY PAYMENTS DECISION

Turn Shopify Payments on. Keep everything else.

You're already on Shopify Plus doing **\$19.93M/yr** — but running **Authorize.net**, which means you pay a fee you don't have to and **Shop Pay is switched off** for an **81%-returning** customer base. This is the rare change that's pure upside: real savings on day one, real growth on top, and the only step to get there is activation.

Off

Shop Pay today — despite an 81% returning-customer rate

\$19.93M

annual GMV, currently on Authorize.net

~\$44K

/yr hard savings on day one (fee + gateway), before any lift

+\$199K

added revenue per 1% Shop Pay conversion lift

The bottom line — it's a win/win

~\$44K/yr in hard savings the day you switch, before a single point of conversion lift — and likely more once we compare your current card rate. Then add **Shop Pay** to a base that's **81% returning**, and the growth upside dwarfs the savings. There's **no platform migration and no rebuild** — you're already on Plus. **Most of your volume is one-time, so the fee waiver and Shop Pay land day one**; only the smaller **subscription portion** (on Appstle, native to Shopify) moves over gradually and hands-free via "slow-drip." **Activation is the only real action.**

Savings + growth + zero rebuild = an easy yes

THE SAVINGS (TCO)

What you stop paying the day you switch.

On Plus, running Authorize.net costs you two ways Shopify Payments simply removes — plus a likely card-rate win once we see a statement.

Third-party transaction fee — waived

+\$39,800/yr

0.2% on Plus, charged today on every Authorize.net order · gone on Shopify Payments

Authorize.net gateway fees — eliminated

+~\$4,000/yr

Monthly gateway + per-transaction fees you drop entirely (est.; confirm on your statement)

Card-rate savings — editable (we finalize this from your statement)

Shopify Payments on Plus is 2.25% + 30¢ standard / 2.95% + 30¢ Amex — blended roughly 2.40% across your ~22% Amex mix. We don't know your current rate yet, so enter it here and the savings update live. (Every 0.10% ≈ ~\$20K/yr on your volume.)

Your current effective card rate

e.g. 2.60 %

Shopify Payments blended rate

2.40 %

Annual card volume

\$ 19930000

Card-rate savings / yr

\$0/yr

(your rate – Shopify rate) × card volume — enter your rate above

Hard savings — day one

≈ \$43,800/yr

Fee waiver + gateway fees + card-rate delta · before any conversion lift

Fee waiver = $0.2\% \times \$19.93\text{M}$ annualized GMV (Plus third-party transaction fee). Authorize.net gateway fees are an estimate pending your statement. Card-rate savings depend on your current effective rate — send a recent processing statement and we'll make this line exact. In-person/manual/net-terms orders (if any) are exempt and excluded. Since most of your volume is one-time, the bulk of the fee waiver lands immediately (plus new subscriptions); the smaller existing-subscription base keeps billing on Authorize.net until it slow-drips over, so that slice phases in.

THE ROI (GROWTH)

Shop Pay is your highest-leverage lever — and it's off.

You retain customers exceptionally well (**81% returning**), yet those returning buyers can't check out with the one-tap wallet they use everywhere else. Shopify's data shows Shop Pay converts **up to ~50% higher than guest checkout**. At your scale, even a modest lift is large: **every 1% lift in conversion $\approx$ +\$199K/yr.**

+\$1,993,000/yr

Illustrative — conversion-lift scenarios applied to \$19.93M annualized GMV, based on Shopify's published Shop Pay benchmark (up to 50% vs guest checkout). Actual lift varies. Shopify Payments also unlocks Shop Pay Installments (higher AOV), the Shop app (150M+ buyers), Shopify Audiences, and free Shopify Protect chargeback coverage — none available on Authorize.net today.

MUTUAL ACTION PLAN

The only real step is activation.

You're already on Shopify Plus, so there's no migration, no re-platform, and no downtime. Everything below is light and runs in parallel — the single go-live action is flipping the switch.

-
- ✓

Discovery & savings analysis

DONE

Your GMV, gateway mix, Amex share and returning-customer rate reviewed; savings + ROI modeled (this doc). [Shopify — Nicole & Angel](#)
-
- 2

Confirm your current card rate

IN PROGRESS

Send a recent merchant processing statement so we lock the exact card-rate savings on top of the ~\$44K. [Prodrome — Martin / Finance](#)
-
- 3

Clear supportability (product claims)

IN PROGRESS

Tighten a small set of product claims to compliant wording so underwriting approves — routine for supplement brands (details below).
[Prodrome — Marketing/Compliance · Shopify supportability](#)
-
- 4

Activate Shopify Payments

THE SWITCH

Turn on Shopify Payments and deactivate Authorize.net — the step that waives the fee and switches Shop Pay on. Minutes in your admin. [Prodrome](#)
-
- 5

The subscription portion moves hands-free (slow-drip)

HANDS-FREE

Subscriptions are only a portion of your orders — the rest (one-time) is fully on Shopify Payments day one. For subs: existing ones keep billing on Authorize.net (now the secondary gateway); new subs and renewals bill on Shopify Payments and migrate one-by-one as cards renew. No customer re-entry, no rebuild — Appstle is native. [Automatic · Shopify + Appstle](#)
-
- 6

Confirm Shop Pay & test order

FINAL

Shop Pay, Apple Pay and Google Pay switch on automatically; run one test order and you're live. [Prodrome · Shopify](#)

Steps 2 and 3 run alongside each other and are light lifts. There is no build, no data migration, and no downtime — activation (step 4) is the only action that changes anything customer-facing.

WHAT YOU NEED TO DO

Clear the supportability review — a quick claims cleanup.

Like every card network and processor, Shopify Payments requires product and marketing claims to be compliant — nothing that says a product **diagnoses, treats, cures, or prevents disease**. This is set out in [Shopify's Acceptable Use Policy](#) — the same policy for every merchant. For a health & science brand it's a standard, one-time review, and it's almost entirely **wording, not product**.

- ✓ **Scan product pages & marketing** for disease/drug-style language — "cures," "treats," "prevents [condition]," "clinically proven to...," or claims implying a medical outcome.
- ✓ **Convert to compliant structure/function claims** — "supports," "helps maintain," "promotes" — with the standard disclaimer ("These statements have not been evaluated by the FDA...").
- ✓ **Remove or substantiate** any specific therapeutic/medical claims you can't back with allowed evidence.
- ✓ **Reply to the supportability team** confirming the updates — that clears the review and unblocks activation.

We'll flag the specific items so you're not guessing, and can point you to how peer supplement/science brands word theirs. Most edits are copy changes on a handful of pages — not reformulation, and not a change to what you sell.

ON THE PAPERWORK

Don't let the legal language give you pause.

It's the same framework every merchant signs.

The Shopify Payments terms, the standard merchant agreement, and the claims/compliance language you'll see — including [Shopify's Acceptable Use Policy](#) — aren't specific to Prodrome and aren't a signal of concern about your business. It's the **identical framework** that applies to **every merchant on the platform** — from a one-person shop to the largest enterprises — and it exists to keep the platform compliant and to protect you.

Nothing in it is unusual for your category, and it doesn't change how you operate. You can review the full framework any time in [Shopify's Legal center](#) (Terms of Service, Payments Terms, and the AUP). If any clause raises a question, we'll walk you (or your counsel) through it — but it's routine, universal, and nothing to get hung up on.

ACTIVATION

What to bring, and what changing payments looks like.

You're already on Plus, so switching your payment provider is a **settings change** — and you can **set up Shopify Payments without turning Authorize.net off first**, so there's **no interruption to checkout**. You flip to Shopify Payments as your sole provider only once you're approved and ready.

What to have ready (U.S.)

- **The store owner** to activate — only the owner can switch to Shopify Payments (staff can't).
- **Two-step authentication** enabled on the account.
- **Business type + legal registered name**
Matching your IRS documents exactly (e.g., SS-4 / CP575 / 147c).
- **EIN**
Or SSN/ITIN if you file as an individual.
- **Authorized representative's details**
Name, DOB, SSN/ITIN, home address, title — plus a photo ID if asked.
- **Anyone who owns 25%+ of the business** — same details.
- **Business bank account** — routing + account numbers (for payouts).
- **Statement descriptor** + a phone number to show on customers' card statements.

The process — switching from Authorize.net

1. **Settings → Payments → Activate Shopify Payments** (store owner).
2. Enter your **business + representative details** and statement descriptor.
3. **Connect your payout bank account** and set your payout schedule (daily / weekly / monthly).
4. **Submit for verification** — usually reviewed within **~24 hours** (status shows "pending").

5. Authorize.net keeps running through this — **zero checkout downtime** while you're approved.
6. Once approved, make **Shopify Payments your primary gateway** — new orders, new subscriptions and any renewed card bill on it. **Shop Pay turns on and the 0.2% fee is waived** on that volume.
7. **Keep Authorize.net connected as the secondary (legacy) gateway** for existing subscriptions so they bill uninterrupted — they move to Shopify Payments one-by-one as cards renew ("slow-drip"). Don't fully deactivate it while subs still bill there.
8. **Place a test order**, confirm your first payout — you're live.

Requirements shown are for U.S. businesses; the exact list is confirmed in your admin. Only the store owner can activate or switch. References: [Setting up Shopify Payments](#) · [U.S. requirements](#) · [Switching from a third-party_provider](#).

NEXT STEP

The only thing left is to activate.

Send the processing statement so we finalize the exact number, we'll flag the handful of claims to tidy, and then it's a switch you flip in your admin — savings on day one, Shop Pay on for your returning customers, nothing rebuilt. Let's turn it on.

Prepared for Prodrome Sciences · Shopify Payments opportunity · by Nicole DeGennaro. Figures built from the Prodrome Shopify account (shop 61916610720): \$19.93M annualized GMV, \$516 AOV, ~22% of card volume on American Express, 81% returning-customer rate, currently processing through Authorize.net on Shopify Plus. Third-party fee waiver = $0.2\% \times \$19.93\text{M}$ (Plus rate). Authorize.net gateway fees are an estimate pending your statement. Card-rate savings depend on your current effective processing rate. Conversion-lift ROI is illustrative,

applied to annualized GMV, based on Shopify's published Shop Pay benchmark of up to 50% higher conversion vs guest checkout; actual results vary. Card rates are standard published Plus rates, confirmed at underwriting.
