

The problem, how we'd solve it, and the numbers.

Centered on the problem statement you laid out — the cost of running fitting on a custom POS front-end, how Shopify POS solves it with ADS staying as your ERP, and what it costs.

01 THE PROBLEM — A CUSTOM POS FRONT-END YOU OWN FOREVER

True Spec's fitting runs on a custom-built POS front-end, with ADS as the ERP / system of record behind it (your Shopify Advanced store is just merch). ADS exists for one reason: years ago Shopify POS couldn't capture fitting specs on line items, so fitters were stuck in Google Sheets and you built your own front-end to escape it. That custom layer now carries ongoing cost and risk:

- **Every POS upgrade is yours to build** — improving the fitting/checkout experience is custom dev work, on your timeline and budget. Tech debt compounds year over year.
- **No native post-fitting payment link** — deals slip when a fitter can't reach a customer by phone after the fitting.
- **You miss the platform's POS innovation** — payment links, Tap to Pay, endless aisle, the Spring '26 updates — each is something you'd have to build yourself, if at all.
- **Security & PCI on the payment path sit with you** — a custom checkout is yours to patch, certify, and keep compliant.

02 HOW WE'D SOLVE IT — MODERN POS UP FRONT, ADS STILL YOUR ERP

The reason you left is gone: Shopify POS now captures custom specs natively on line items — Chris Cote's Golf runs exactly this fitting workflow today. Put Shopify POS on the fitting front-end and keep ADS as your system of record — in tandem, not a rip-and-replace. Native today, no custom build:

- ▶ **Build-spec capture on line items** — length, swing weight, CPM, adapter settings flow to your build team with no price impact. The original blocker, solved (POS v11 ~73s faster per complex cart).
- ▶ **Fitter + location attribution** — every sale logs to the studio and the fitter for commission & accounting reporting, natively — replacing the manual ADS step.
- ▶ **Gift cards, physical + digital** — one unified balance across online + in-store (your site is mostly gift cards today).
- ▶ **Text/email payment link in <30s** — the one you flagged first: the customer pays from their phone, recovering post-fitting deals that slip today.
- ▶ **Auto studio → HQ fulfillment routing** — the studio rings the sale and the order ships from Scottsdale automatically. No more double-ships.
- ▶ **Required "how'd you hear about us" field** — your marketing gate, native at checkout. Plus a platform that ships upgrades, security, and new features for you.

Why Plus, and the honest catch: POS Pro is included on Plus at every location — à la carte ~\$89/mo per store (~\$44K/yr across 41) — so the \$2,300/mo license covers POS everywhere, plus upgrades, security, and the lowest card rates. The real build is a **custom ADS↔Shopify integration** (inventory in, orders/payments back to ADS) — a scoped one-time dev cost, included below. Phased and non-disruptive: stand up POS for fitting → pilot a few locations side-by-side → roll out across all 41.

+ NEW IN SPRING '26 POS — INCLUDED, NOT CUSTOM-BUILT

- ▶ **Endless aisle / ship-to-customer** — sell any club, head, or shaft from the full catalog and ship it when a location's out of stock. Capture the walk-out sale.
- ▶ **Online → in-person via Shop app** — send local Shop shoppers to the nearest store; online demand becomes foot traffic.
- ▶ **Tap to Pay across locations** — contactless payment on a phone anywhere on the floor; also trims hardware.
- ▶ **Returns & exchanges in one cart** — refund, exchange, and new sale together, keeping the customer in the chair.

~ WHAT WE'D SCOPE TOGETHER — THE HONEST GAPS

- **The configurator** (70k+ combinations) — a product-configurator app writes each build to a single line item with its spec; it won't map to native variants.
- **Intercompany / on-account billing** across the brands — maps toward Shopify B2B (company profiles, payment terms); needs architecture scoping.
- **"Phantom orders"** — root cause is that ShipStation can't write back to Shopify; resolved once fulfillment runs through Shopify.
- **Appointment / booking** — a booking app; today bookings live in ADS and feed the prescription.
- **Expedite fees that scale by club count** — handled with Shopify Functions (developer-level, not native config).

03 THE MONEY

Illustrative model — figures use industry benchmarks and what you shared on our calls. The ADS↔Shopify integration scope is the key variable; tell me which numbers to swap in (below) and the math holds.

ANNUAL COST	TODAY	WITH SHOPIFY POS (PLUS)
ADS (ERP / system of record)	\$60,000	\$60,000 stays
Card processing (~\$19.5M volume)	\$565,500 @2.9%	\$487,500 @2.5%
ADS ↔ Shopify integration upkeep	—	\$10,000 new
Platform license (Plus adds POS Pro, all 41)	\$4,800 Advanced	\$27,600 Plus
Annual operating total	\$630,300	\$585,100
Recurring operating savings / yr		+\$45,200
+ One-time: implementation + custom ADS↔Shopify integration	—	\$45,000
+ One-time: POS hardware (~58 fitters)	—	\$11,000

OPERATING SAVINGS / YR

Card processing (2.9% → 2.5%)	+\$78,000
Ops time — 10 hrs/wk (Cote's, @\$40/hr)	+\$20,800
Less: incremental license (Advanced → Plus)	-\$22,800
Less: ADS↔Shopify integration upkeep (new)	-\$10,000
Net recurring savings	≈ \$66,000

REVENUE LIFT / YR (conservative)

Recovered post-fitting deals via payment links	+\$75,000
Endless aisle — ship out-of-stock from full catalog	upside
Faster checkout → more fitting capacity	upside
Revenue lift alone roughly covers the Year-1 build. Cote's Golf: ~50% less custom-order processing time.	

NET RECURRING SAVINGS

~\$66K/yr

Before revenue lift

YEAR-1 ONE-TIME COST

~\$56K

\$45K build/integration + \$11K hardware

PAYBACK

<1 yr

Faster once revenue lift is counted

If it's worth a look: let me know which numbers to swap in — the ADS↔Shopify integration scope, your card rate + payment-portal fees, and annual card volume — and we can review the real TCO together.
